Bug & Issue Report

Confirmed findings, product questions, and checks that remain unverified

Product	Cynbit public website and candidate portal
Test period	30–31 October 2026
Status	Open observations; no fix verification was performed

Severity guide

Suggested severity	Meaning
Medium	A primary action fails, important information is misleading, an application can proceed with materially invalid data, or a required enquiry can be submitted incomplete.
Low	A content, sharing, or data-quality issue has a workaround or does not block the main journey.
Needs confirmation	The behavior may be an intentional responsive/product choice; confirm expected behavior before filing as a defect.
Unverified	The test stopped before a safe or conclusive outcome; do not count as a confirmed defect.

Severity is suggested from the observed user impact and may be adjusted by the product team. Evidence references use the observation numbers and matching screenshot prefixes supplied by the tester.

F-01 | Observation #21 | Medium

Contact page — “Write us” button is unresponsive

Steps: On the Contact page, click “Write us.” Repeated at 375 × 667, 390 × 844, and 768 × 1024.

Actual: At all three viewports, clicking produced no visible response, navigation, or scroll.

Expected: The button should open a contact method or take the user to the relevant contact form.

Impact: Primary contact CTA is unavailable; users must find another route to contact the company.

F-02 | Observation #19 | Medium

Mobile navigation menu has no visible close control

Steps: At 375 × 667 and 768 × 1024, open the hamburger navigation and inspect it at the top.

Actual: The open menu shows no visible X or hamburger toggle to close it. At 375 × 667, pressing Esc did not close it.

Expected: The menu should provide a visible close control or a persistent toggle so users can return to the current page without navigating elsewhere.

Impact: The menu has no clear dismissal path, making navigation state difficult to recover from.

F-03 | Observation #5 | Medium

Careers QA application accepts invalid or inconsistent values

Steps: In the QA Testing Intern application, enter a future date of birth, a numeric-only name, a future graduation year while education status is “Completed,” and alphabetic text (abc) for Notice Period. Complete fields that are otherwise required and submit.

Actual: The application was submitted successfully.

Expected: The form should flag a future date of birth and values that conflict with the selected education status or expected notice-period format, with clear correction messages.

Impact: The application record may contain implausible or contradictory candidate information.

F-04 | Observation #9, #11, #12 | Medium

Required service-enquiry fields accept whitespace-only input

Steps: In IT Services Discovery, AI Suite Inquiry, and Growth Engineering, first leave the required field empty to see the prompt, then enter only spaces and submit with other required fields completed. Affected fields: IT Services Discovery Full Name and Project Brief; AI Suite Current Tech Stack and Project Brief; Growth Engineering Full Name, Target Audience, and Project Brief.

Actual: The spaces-only values were accepted and the requests were submitted.

Expected: Trim input before validation; treat a spaces-only value as empty, show a field-level message, and block submission until meaningful content is entered.

Impact: Incomplete service requests can reach the review team.

F-05 | Observation #16 | Medium

Different learning tracks show the same 60-day syllabus

Steps: Select Full Stack and open “View full 60-day syllabus”; then select QA & Test Automation and open the syllabus.

Actual: The same syllabus content appeared for both tracks.

Expected: Show the syllabus for the selected track, or clearly state that the syllabus is shared across tracks.

Impact: Learners may compare tracks using inaccurate or confusing curriculum information.

F-06 | Observation #7 | Low

Contact form accepts a clearly malformed name

Steps: On the Contact page, enter 123@$ in Full Name, complete the other fields, and select Send Inquiry.

Actual: The inquiry was submitted and the page displayed “Inquiry Received.”

Expected: Flag clearly malformed name input and explain how to correct it, while still allowing legitimate international names.

Impact: Low-quality contact names may be stored.

F-07 | Observation #8 | Low

AI Suite enquiry accepts a clearly malformed name

Steps: Open Services → AI Suite Inquiry, enter abc@#$%1 as the name, complete other required fields, and submit.

Actual: The request was submitted successfully.

Expected: Flag a clearly malformed name with a helpful message, while allowing valid international names.

Impact: Poor-quality enquiry data may be recorded.

F-08 | Observation #10 | Low

IT Services Discovery accepts a symbol-only name

Steps: Submit IT Services Discovery using ~###&^*/ as the Full Name, completing other required fields.

Actual: The request was submitted successfully with the symbol-only name.

Expected: Reject clearly malformed symbol-only names while accepting valid names with accents, spaces, hyphens, and apostrophes.

Impact: The submitted lead may not have a usable contact name.

F-09 | Observation #14 | Low

Product enquiries accept malformed or whitespace-only text

Steps: In the Studio, TenantEase, and Revio enquiry forms, use a symbol-only name and spaces-only text in the fields tested, including Full Name and How Can We Help; submit with the other required fields completed.

Actual: The enquiries were accepted and a request-received confirmation appeared.

Expected: Flag clearly malformed names/company names. For required text fields, trim whitespace and reject spaces-only values with a clear message.

Impact: Enquiries may be stored without usable contact or request details.

F-10 | Observation #15 | Low

SprintPulse registration accepts a symbol-only name

Steps: In Bitlevate → SprintPulse Project Management SaaS → Direct Sprint Registration, enter a symbol-only Full Name, complete other required fields, and continue.

Actual: The form accepted the name and proceeded to the payment checkout. Testing stopped there; no payment was made.

Expected: Flag a clearly invalid name and request correction before proceeding to checkout.

Impact: Registration data may contain an unusable applicant name.

F-11 | Observation #17 | Low

Write Your Diary accepts spaces-only content

Steps: In Write Your Diary, enter only spaces in Name, Current Role/Path, Diary Title, and Your Story, then submit.

Actual: Submission succeeded and the entry was queued for review.

Expected: Trim whitespace and flag spaces-only entries in fields that require meaningful content.

Impact: Blank or unusable submissions may enter the review queue.

F-12 | Observation #18 | Low

Blog article share button gives no response

Steps: Open the IT Strategy article and click the share icon beside the publication date.

Actual: No share options or confirmation appeared, and no article link was copied.

Expected: Open sharing options or copy the article link and confirm the action.

Impact: Readers cannot use the advertised sharing control.

F-13 | Observation #3 | Low

Assessment labels do not match the QA task

Steps: Review the QA Testing Intern assessment deliverable-link and notes fields.

Actual: The form uses “Campaign Plan / Creatives / Strategy Rationale” and “Execution Notes & Campaign Rationale,” which appear unrelated to the requested QA audit.

Expected: Use labels that describe QA deliverables, such as evidence links and testing notes, or explain the intended content.

Impact: Candidates may be unsure what to submit.

F-14 | Observation #6 | Low

Application confirmation copy refers to an unrelated architectural task

Steps: Submit the QA Testing Intern application and review the confirmation.

Actual: The confirmation says, “Your technical blueprint is now with our core architectural team.”

Expected: Confirm receipt of the QA internship application using wording appropriate to that role.

Impact: Applicants may doubt whether the application was routed correctly.

Observation requiring product confirmation

Q-01 | Observation #20 | Support-ticket control is not shown at 375 × 667

Observed: The floating “Need Help? Submit Support Ticket” control was not seen while scrolling at 375 × 667; it was visible at 768 × 1024.

Why confirmation is needed: The control may be intentionally hidden on narrow screens to prevent content obstruction. Confirm whether the support-ticket workflow is available through another mobile route, such as the navigation/contact area.

Suggested expected behavior: Candidates should be able to reach support from mobile without a floating control obscuring content.

Inconclusive checks — do not report as confirmed bugs

U-01 | Observation #1

Primary deliverable link: no inline message appeared after leaving an empty or invalid/long value. The assessment was not submitted, so acceptance or rejection on submission is unknown.

U-02 | Observation #2

Additional deliverable links: add/remove worked through the stated four-link limit and the count updated. Duplicate, invalid, and empty additional values showed no inline message on blur; submission was not performed, so validation outcome is unknown.

U-03 | Observation #4

Support-ticket form: no message was seen before submission with empty or long input. The form was not submitted to avoid creating a real ticket; required-field and length validation remain unverified.

U-04 | Observation #13

Newsletter: success was shown for an email with trailing spaces and for a repeated uppercase address. The UI does not establish whether whitespace was trimmed or whether a duplicate subscription was stored; no confirmed defect.
